

BASICS OF COMPUTER AND PROGRAMMING LANGUAGES

Computer is a device which can take the data as input, store and performs any action on it based upon the given command from user or variable programmes

Types of computer

- Stored typed computers- Programmable example laptops mobile
- Fixed type computers- Not programmable example TV, calculator

Components of computers

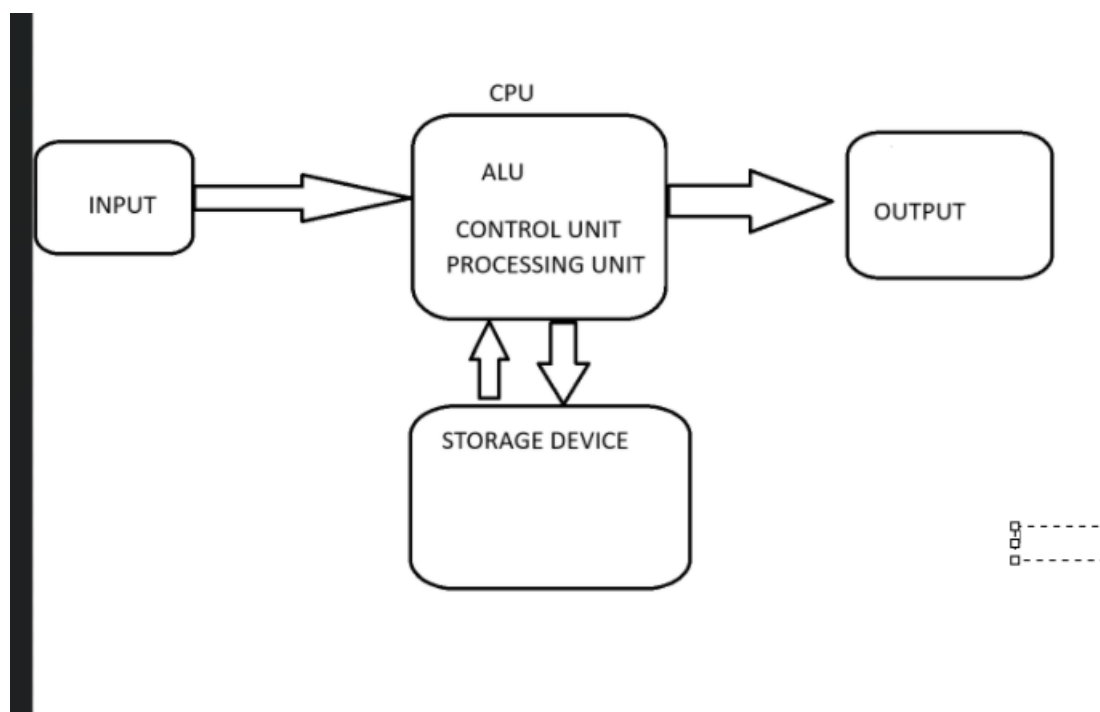

CPU

STORING DEVICE

HDD/SSD

INPUT/OUTPUT DEVICES

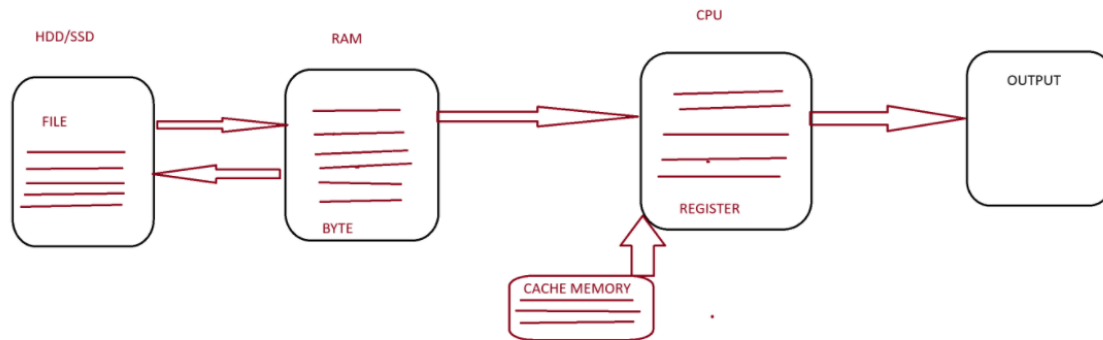

RAM

Whats the need of RAM

CPU is a semiconductor based device and is responsible for processing the data at faster rate while storage cant transport data at such high speed due to which overall performance affected thus ram act as unit which stores the data temporarily

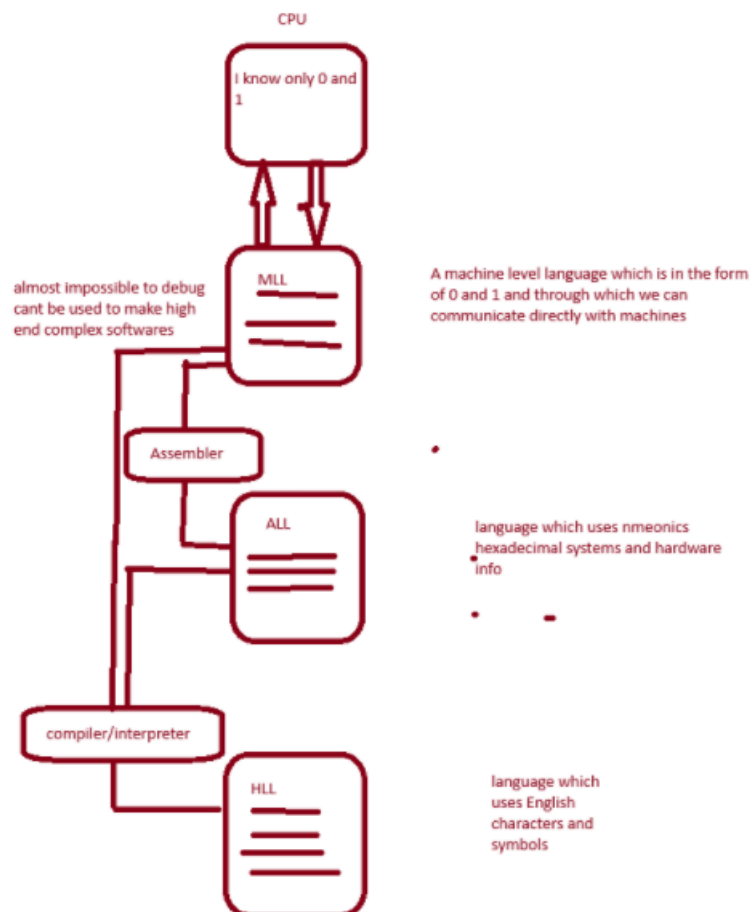

that is it is volatile in nature and sends the data with similar speed as executed by cpu

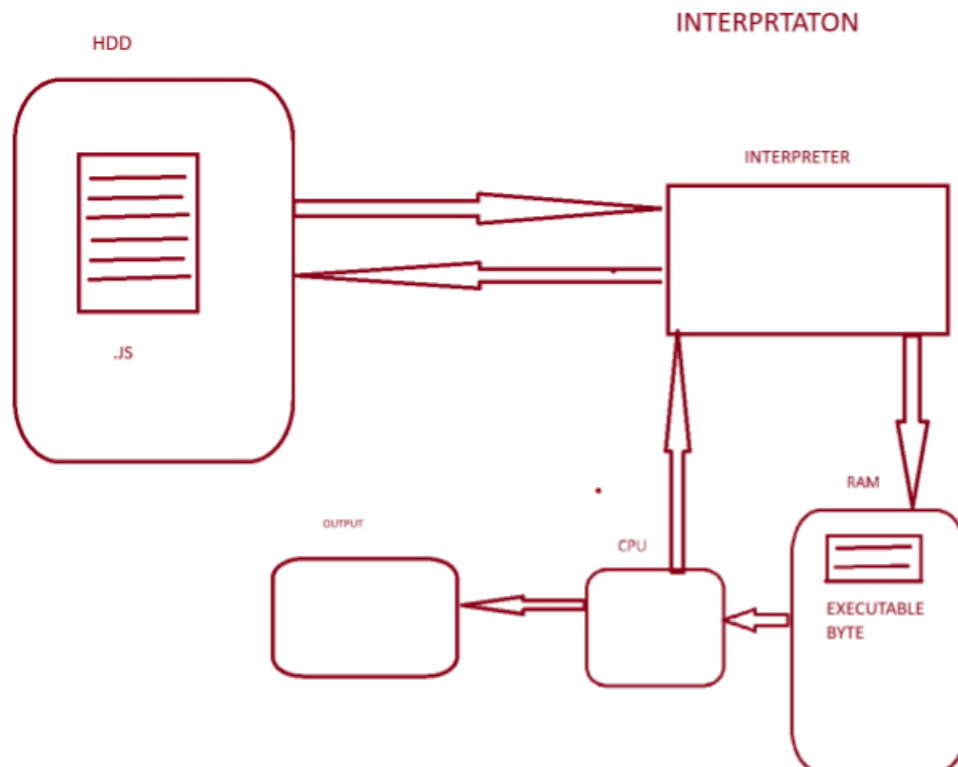

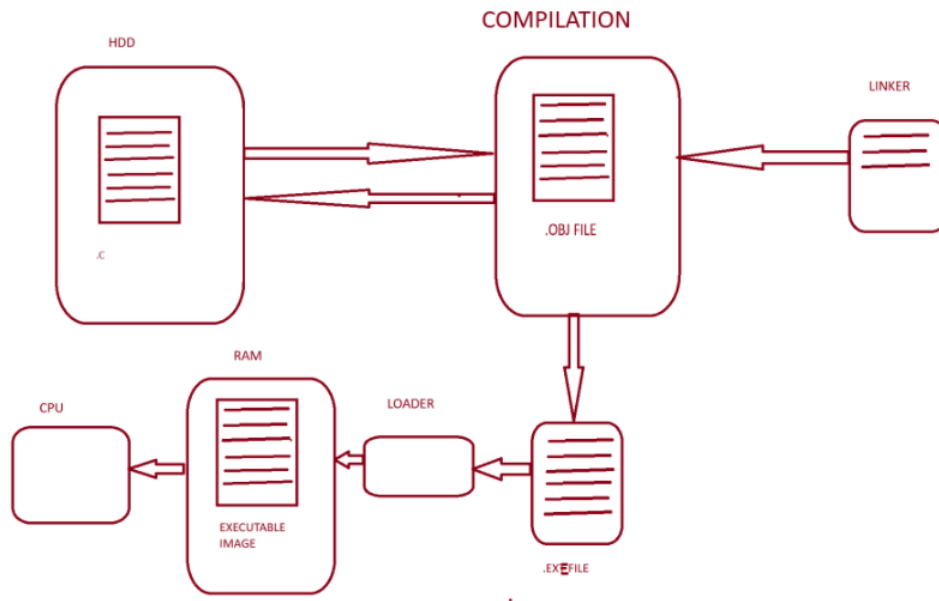

WHAT IS PROGRAMMING LANGUAGE ?

PROGRAMME- It is set of instruction given as input to perform them
software is a collection of programme

Story of evolution of programming languages -

COMPILATION VS INTERPRETATION

COMPILATION

READING AND MAKING OBJ FILE IN ONE SHOT

FAST EXECTION SPEED

DEBUGGING IS SLOW

SOURCE FIL ENOT NEEDED MULTIPLE TIME

INTERPRETATION

INSTRUCTION BY INSTRUCTION EXECUTION

SLOW EXECUTION SPEED

DEBUGGING IS FAST

SOURCE FILE NEEDED MULTIPLE TIME
